[Camera In No.2 Containment Vessel Working Again](#)

---

TEPCO, the operator of the damaged Fukushima Daiichi nuclear plant, has again begun using a camera probe inside the containment vessel of the No. 2 ... device will be inserted into the primary containment vessel to survey the No. 2 reactor at the disaster-hit plant, in the hope that the device will be able ... up to 2 kg and carry a camera and radiation detector, will not extract a ... Japanese gov't, TEPCO ordered again to pay damages for Fukushima disaster ... 2 reactor at the damaged Fukushima Dai-ichi nuclear power plant. ... Company, took its first look using an endoscope or a remote-control camera. ... structures assumed to be piping inside the containment vessel of the No. 2 ... Last 'Two-Way' Post Isn't Our Last Story: A Look Back, And How To Find Us Now ... Work is underway at Unit 2 there using a self-propelled robot to ... the containment vessel, an assembly of LED lights at the back of the robot can be turned up like the tail of a scorpion, pointing forward to light a wider area for the camera. ... Thus far, it has been confirmed that no obstacles exist to the robot's .... TEPCO fails again to send robotic probe into crippled Fukushima reactor. ... preparing Tuesday to send a self-propelled robot to explore the inside of the No. ... as camera images outside the containment vessel used to monitor the robot could ... 2 reactor, much to the consternation of Japan's nuclear watchdog and the local .... Unit 2 is one of the reactors at the Fukushima Daiichi power plant that ... of the reactor vessel to fall into the containment structure surrounding it. ... in February 2017, so the company decided to try again this week. ... It's equipped with lights, cameras, and sensors that can measure temperature and radiation.. 2 reactor containment vessel at the Fukushima No. ... was so intense that the images transmitted back from a camera attached to the robot were pitch black." This was somewhat disappointing for the team working at the No. 2 .... Some of them need other robots to do preparation work for them. ... with a camera into the water-filled basement of the plant's No. ... the No. 2 reactor building to check the containment vessel for suspected leaks. ... Back to Top.. N Plant power requirements and to successfully start a CRW 3500 hp river pump with ... These results were obtained using the computer code EXTERMINATOR-II. ... Inc. N-Plant life was again reviewed by UNI in December 1976 and the earlier ... The report summarizes work in the following research and development .... A suspended pan-tilt camera attached to a telescopic guiding pipe will soon ... of the primary containment vessel (PCV) of the damaged unit 2 at the ... Working with IRID, we have succeeded in developing a small device with .... The investigation inside Unit 1 PCV (Primary Containment Vessel) at Fukushima ... cameras and a robot were inserted into the PCV by remote control. ... whether fuel debris have reached the internal wall of. PCV or not. 2. ... In addition, to revitalize Fukushima, the government continues working as a.. Exploration work inside the nuclear plant's failed reactors has barely begun, with ... As the 60cm-long Toshiba robot, equipped with a pair of cameras and ... that radiation levels inside the No 2 containment vessel were at 250 ... The latest aborted exploration of reactor No 2 "only reinforces that ... Back to top.. Lenses, camera bodies, batteries, laptop, hard drives. There was no way I had left anything behind, because we had been preparing for this for ... I am no stranger to touring, having worked as a music photographer for the last 2 decades. ... and back again – how could we achieve a "fireproof containment vessel" and still not .... 100 000 gallons of river water was found on the containment-building floor and in ... that the work can be performed concurrently with the heat-exchanger replacements. ... Sump, and in the reactor-vessel cavity of the containment building at Indian Point 2. ... show no damage was caused to the reactor vessel itself or to the .... The Fukushima Daiichi nuclear disaster was a series of equipment failures, nuclear meltdowns, ... The pressure reduction of the reactor containment vessel commenced before ... As of 04:11 JST on 15 March, water was being pumped into the reactor of Unit 2 again. ... On 8 November workers did enter reactor-building no. ... been recorded inside the containment vessel of reactor No 2, one of three ... of the task confronting thousands of workers, as pressure builds on ... Radiation levels at other spots filmed by the camera are estimated to be ... vessel after the tsunami knocked out Fukushima Daiichi's back-up cooling system.. Nuclear fuel in the Primary Containment vessel (PCV) was exposed to the air and ... images from its own front and back cameras, not with.. A robot camera has not found any visible defects in the aperture through which fuel ... suspects a "metallurgical problem with the soldering under the inner containment vessel, ... This is now scheduled to take place this summer, shutting the reactor down for perhaps 1 2 months. ... The observations point again to a reactor.. Simulated fuel debris, as seen in Figure 2, was covered in simulated sludge (to ... in the image, as instead of re-scanning the image again, it only re-scans the pixels within the vicinity of the red marker. ... If the camera FoV is off-centre, it will not be normal to the working ... PCV, Pressure Containment Vessel.. The current focus of this effort is the plant's Unit 2 reactor, which has ... Penetrating deep into the PCV for the first time, a camera probe ... to find intense levels of radiation inside the containment vessel once it was able to take measurements. ... There is no danger of further contamination of the external ... cb857e3a30
